

Libelle Ceiling Dryer

Installation

- Using a #6 bit, drill two rawlplug holes 1070 mm apart at the desired position in the ceiling.
- Attach the two ceiling supports (U-shape) to the ceiling.
- Push the ceiling lift hinge brackets onto the ceiling supports and secure them using the accompanying screws.

Mounting the Libelle

- The ceiling dryer is held up by a latch.
- In order to mount the Libelle, the latch must be open so that the lift can be pulled down.
- Hold the Libelle in place using the middle plastic catch by snapping it into the middle hole on the Libelle's centre bar.
- Then, snap the two outside plastic catches into place.
- Now, the Libelle can be raised.
- The latch locks into place when the lift reaches the upper position. A short tug opens the latch, and the lift can be lowered again.
